

# Introducing the RDX® from Roco Rescue... Making Fast Rope Operations Safer!

**Friction Control Pad** reduces heat and enhances control of descent.

**Easy to Use Design** integrates with standard fast rope techniques.

**Multiple RDX Users** can effectively fast rope on a single rope, allowing for a faster, safer and more efficient operations.

**Tandem Fast Rope Operations** with K-9 or equipment are made possible with the RDX.

Fast roping is inherently dangerous... particularly when transporting heavy loads. The new RDX Fast Rope device from Roco can make all fast rope operations safer by providing added descent control especially during tandem operations with equipment or K-9s.

Simple to operate, the RDX is used in conjunction with standard fast rope techniques. The device consists of a customized rope with an integrated Friction Control Pad (FCP) and two sewn eyelets, one at each end.

Configured in a "sandal wrap" friction knot on a fast rope, the RDX allows for a controlled descent similar to an "autoblock" knot. It also reduces the heat typically generated by fast rope operations, which may allow the use of a single pair of leather gloves rather than heavy-duty or a double pair of gloves.

Multiple RDX users can effectively fast rope simultaneously on a single rope. Tandem (equipment or K-9) fast rope operations can be accomplished safely by using the RDX. Maximum total loaded weight while using the RDX is 350 lbs.

Compact, lightweight and durable, the RDX can easily be stowed in a cargo pocket. It can also be used as an anchor sling (22kN), tie down, K-9 leash, etc.

**WARNING:** Proper training in the use of the RDX is required prior to use. Proper care, storage and inspection of the RDX is required.

**Marketed by:**

Part # K-RDX Roco RDX® System (Patent Pending)

## Key Features:

- Simple to operate – used in conjunction with standard fast rope techniques.
- Easy to carry – compact and ultra-lightweight while offering the user a safer way to control descent with heavier weights.
- Efficient to use – provides excellent control for tandem (K-9 or heavy equipment) fast rope operations.
- System includes – RDX, tether, Kong carabiner and mesh storage bag.
